

Technical & Device Issues Support

Last Updated: March 25, 2026

At My Shop, we are dedicated to ensuring that every customer enjoys a seamless and reliable experience across all devices and platforms. While our platform is designed and tested for broad compatibility and stable performance, technical issues can occasionally arise due to factors such as device configuration, browser settings, or network conditions. This guide is intended to help customers identify, understand, and resolve the most common technical issues efficiently, and to clarify when escalation to our Customer Support team is appropriate.

1. General Website and App Performance Issues

If you encounter issues such as pages failing to load, buttons not responding, error messages appearing unexpectedly, or content displaying incorrectly, the following steps are recommended before contacting support.

Begin by verifying that your device is connected to a stable internet connection, whether via Wi-Fi or a mobile data network, as intermittent connectivity is a frequent cause of loading and display problems. Next, confirm that you are using the latest version of your web browser or the My Shop mobile application, as outdated versions may lack compatibility with recent platform updates. Clearing your browser cache and cookies, or clearing the app cache on your mobile device, can resolve a range of temporary glitches and display inconsistencies. Restarting your device is also recommended, as it clears temporary system processes that may be interfering with normal operation.

If the issue persists after completing the above steps, attempt to access My Shop using a different browser or device to determine whether the problem is isolated to a specific environment. Should the issue continue across multiple devices or browsers, please contact our Customer Support team with the following details: your device type and model, operating system and version, browser or app version, a clear description of the issue, and any relevant screenshots. This information will enable our team to investigate and resolve the matter as efficiently as possible.

2. Login and Account Access Issues

Difficulty accessing your account may arise from a number of causes, including incorrectly entered credentials, pending account verification requirements, or session conflicts resulting from simultaneous sign-ins across multiple devices.

If you are unable to sign in, first verify that your email address and password have been entered correctly, taking care to check for typographical errors or unintended use of

uppercase characters. If you have forgotten your password, select the **"Forgot Password"** option on the login page to initiate a secure password reset via your registered email address. Certain devices and account configurations may require additional identity verification through a one-time code sent via email or SMS; ensure that you have access to the contact method associated with your account.

If you suspect that an active session on another device is causing a conflict, sign out of all other sessions and attempt to log in again. For account access issues that cannot be resolved through the steps above, please contact our Customer Support team with your registered account information so that we may investigate and restore access promptly.

3. Device and Browser Compatibility

My Shop is designed to function optimally on modern devices and up-to-date web browsers. Supported browsers include Google Chrome, Mozilla Firefox, Microsoft Edge, and Apple Safari. For the best possible experience, we recommend ensuring that your browser and operating system are kept current with the latest available updates.

Customers using older devices or legacy browser versions may experience degraded performance, including display irregularities or slower page load times. While My Shop endeavors to maintain broad compatibility, certain advanced platform features may not function as intended on significantly outdated software environments. Regularly updating your device's operating system and installed applications is the most effective measure for preventing compatibility-related issues.

4. Account Security Best Practices

Maintaining the security of your My Shop account is a shared responsibility. We strongly encourage all customers to use a strong, unique password for their My Shop account — one that is not reused across other platforms. Where available, enabling two-factor authentication provides an additional layer of protection against unauthorized access.

When accessing your account on a shared or public device, always sign out upon completing your session and avoid saving credentials in the browser. We also advise against accessing your account over public or unsecured Wi-Fi networks, as these environments may expose your data to interception. Keeping your devices and applications updated with the latest security patches further reduces exposure to known vulnerabilities.

5. Contacting Customer Support

If the troubleshooting steps outlined above do not resolve your issue, our Customer Support team is available to provide further assistance through the following channels.

You may reach us by email at **support@myshop.vn**, by phone at **+84 123 456 789**, or via the live chat feature accessible directly through the My Shop website and mobile application. To help our team diagnose and resolve your issue as efficiently as possible, please provide the following when reaching out: your device type and model, operating system version, browser or application version, a clear and detailed description of the issue experienced, and screenshots where available.

We are committed to responding to all support enquiries promptly and to ensuring that any technical difficulties you encounter are resolved with minimal disruption to your shopping experience.
