

Sanquo

Terms of Service & Business Policies

Effective Date: 30 April 2026 | Version 1.0

Section 3: Payment Methods

Sanquo is committed to making every transaction as simple, secure, and transparent as possible. This Section sets out the payment options available to customers, the security standards that protect every transaction, the currency framework governing purchases, the step-by-step payment and confirmation process, and the dedicated support available should any payment issue arise. Customers are encouraged to read this Section carefully before completing a purchase.

3.1 Accepted Payment Methods

Sanquo accepts the following forms of payment. All methods listed below have been selected to ensure broad accessibility, operational reliability, and alignment with the preferences of Vietnamese consumers.

- **Digital Wallets:** Sanquo supports payments via ZaloPay, etc. Customers must ensure their wallet account is active and sufficiently funded prior to checkout.
- **Cash on Delivery (COD):** COD is available for eligible orders delivered within supported zones across Vietnam. The customer pays the delivery agent in cash upon receipt of the package. COD availability is indicated at checkout and may be subject to order value limits.
- **Sanquo Platform Credits and Gift Vouchers:** Where applicable, customers may apply accumulated platform credits or promotional gift vouchers as full or partial payment at checkout. Credits and vouchers are non-transferable and subject to the terms of the applicable promotion.

The availability of specific payment methods may vary depending on order value, delivery location, or current promotional context. Sanquo reserves the right to add, modify, or discontinue any payment option at any time, with reasonable notice provided to customers where practicable.

3.2 Payment Security

The security of every financial transaction conducted on Sanquo is a matter of the highest priority. Sanquo has implemented multiple layers of industry-standard security technology to protect customer payment data at every stage of the transaction lifecycle.

All payment data transmitted between the customer's device and Sanquo's servers is encrypted using SSL (Secure Sockets Layer) / TLS (Transport Layer Security) protocols. This encryption ensures that sensitive information — including card details and authentication credentials — cannot be intercepted or read by unauthorised parties during transmission.

Sanquo's payment processing infrastructure is compliant with the Payment Card Industry Data Security Standard (PCI DSS), the globally recognised framework that governs the secure handling, processing, storage, and transmission of cardholder data. PCI DSS compliance is independently audited and represents the benchmark standard for e-commerce payment security worldwide.

Sanquo does not store full card numbers, CVV security codes, or any other sensitive authentication data on its servers. Upon entry, payment credentials are tokenised: the raw card data is replaced with a unique, encrypted reference token that is meaningless if intercepted. This tokenisation architecture ensures that even in the unlikely event of a security incident, no usable card data is exposed.

For card-based transactions, Sanquo supports 3D Secure (3DS) authentication, an additional verification layer that requires the cardholder to confirm their identity through a one-time password or biometric prompt issued by their bank before the transaction is authorised. Where 3DS is required, customers will be redirected to their bank's secure authentication environment automatically.

Sanquo employs real-time fraud detection systems that continuously monitor transactions for anomalous patterns or indicators of fraudulent activity. Transactions flagged by these systems may be placed on hold pending additional verification from the customer or manual review by Sanquo's security team. Customers will be notified promptly if their transaction requires further verification.

Important: Sanquo staff will never request your full card number, CVV code, banking password, or one-time password (OTP) through any communication channel, including email, live chat, or telephone. If you receive any such request purportedly from Sanquo, do not comply and report it immediately to payments@Sanquo.vn.

3.3 Currency and International Transactions

Sanquo operates exclusively in Vietnamese Dong (VND). All product prices, order totals, promotional discounts, and transaction records displayed on the Platform are denominated in VND. VND is the sole currency in which Sanquo processes and settles transactions.

Customers paying with internationally issued debit or credit cards will have their transactions settled in VND. Any conversion from the cardholder's home currency to VND is performed by the issuing bank or the relevant payment network (such as Visa or Mastercard) at the exchange rate applicable at the time of settlement. Sanquo has no influence over the exchange rate applied, and the rate used by the issuing bank may differ from the publicly quoted interbank rate on the date of purchase.

Sanquo does not apply any currency conversion markup, foreign transaction surcharge, or cross-border processing fee on its end. The total amount charged by Sanquo will always correspond precisely to the VND order total displayed at checkout. Any additional charges that appear on the customer's bank or card statement — such as foreign transaction fees or currency conversion commissions — are levied exclusively by the customer's financial institution and are entirely outside Sanquo's control.

Customers intending to pay with an internationally issued card are advised to contact their issuing bank in advance to confirm that cross-border e-commerce transactions are permitted on their card, and to enquire about any applicable fees. Additionally, customers should be aware that exchange rate fluctuations between the time of order placement and the time of final settlement may result in a marginal variance in the total amount reflected on their bank statement. Sanquo accepts no liability for such variances.

3.4 Order Confirmation and Payment Processing

The following describes the end-to-end payment and confirmation process from the moment a customer initiates checkout through to the receipt of their order confirmation.

Step 1 — Payment Initiation: Upon the customer selecting their preferred payment method and tapping "Place Order," the Platform immediately initiates a real-time authorisation request to the relevant payment processor, card network, or financial institution. At this point, the order is assigned a "Pending" status and no charge is committed to the customer's account until authorisation is confirmed.

Step 2 — Authorisation: For e-wallet payments, authorisation is typically completed within seconds. For digital transfers, the order will remain in "Awaiting Payment" status until funds are received and verified by Sanquo's finance team, a process that typically takes one (1) to

two (2) business days. For COD orders, no pre-authorisation is required; payment is confirmed at the point of physical delivery.

Step 3 — Confirmation: Once payment is successfully authorised or verified, the order status is updated to "Confirmed" and an automated confirmation email is dispatched to the customer's registered email address within five (5) minutes. This email contains the order number, an itemised summary of the purchase, the total amount charged, and the estimated dispatch timeframe.

Step 4 — Failed Authorisation: If a payment attempt fails — due to insufficient funds, card restrictions, network error, or a declined transaction — the customer will be notified immediately within the Platform interface and invited to retry using an alternative payment method. No charge will be applied or reserved against the customer's account as a result of a failed authorisation attempt.

Step 5 — Order Timeout: Sanquo reserves the right to cancel any order for which payment is not successfully completed within twenty-four (24) hours of order placement, applicable to bank transfer orders. Customers will be notified of the cancellation and may place a new order at their convenience.

Step 6 — Duplicate Charge Resolution: In the rare event that a technical error results in a duplicate charge being applied to a customer's account, Sanquo will identify and reverse the erroneous charge within three (3) to five (5) business days of the error being identified or reported. A written confirmation of the reversal will be sent to the customer's registered email address.

3.5 Customer Support for Payment Issues

Sanquo operates a dedicated payment support function to assist customers with any transaction-related concern promptly and effectively. Whether the issue involves a failed payment, an unrecognised charge, a delayed confirmation, a refund status enquiry, or any other payment matter, customers can expect a responsive and solution-focused service.

Payment support is available through email at payments@sanquo.vn. Sanquo targets a first response within two (2) business hours of a query being received during operating hours. The payment support team operates Monday to Saturday, 8:00 AM to 8:00 PM (Vietnamese Time, UTC+7).

To facilitate the fastest possible resolution, customers contacting payment support should have the following information readily available: their order number, the email address registered to their Sanquo account, and the payment method used. Providing this

information at the outset eliminates the need for back-and-forth verification and enables the support team to act immediately.

In the event of an urgent payment matter — such as an unauthorised transaction or a suspected compromise of a payment instrument used on the Platform — customers should take the following steps without delay: first, contact their bank or card issuer to freeze the affected account or card; second, notify Sanquo's payment support team via the channels above so that appropriate action can be taken on the Platform side.

All payment support enquiries are assigned a unique case reference number upon receipt and are logged in Sanquo's internal dispute tracking system. Customers will be kept informed of the status and progress of their case until full resolution is achieved. Sanquo is committed to resolving all payment disputes fairly, transparently, and in accordance with applicable Vietnamese consumer protection law.
